

Plexis Quantum EDI Highlights

Reduce Administrative Costs with Quantum EDI

- Supports most X12 and non-standard formats
- Import, Auto Adjudicate & export functionalities including automated PPO repricing
- Customizable to client's specific needs, including individual/specific trading partner parameter setup
- Intermediary SQL Server database allows for use of SQL queries, additional business rules, and extensible reporting of native data
- Configurable mapping & business logic rules
- Conversion & insertion of X12, XML or flat file data into Quantum Choice database
- Serves as gateway for X12, XML and proprietary formatted data for intra and inter-company transmission

QEDI0609-v3

Advanced EDI Efficiency Increases Cost Savings and Adaptability to Meet Changing Data Requirements

Quantum EDI is an advanced, full-featured electronic gateway that combines EDI, an XML-based translator, and data conversion interface with a powerful validation engine that conforms to your organization's information flow. These components work together to move X12 and other electronic data formats to and from Plexis Quantum Choice with smooth efficiency.

EDI Interface Supports Major X12 Formats

Quantum EDI easily facilitates import and export of the most predominant HIPAA X12 formats. The application also supports data transfer of non-standard formats to and from Plexis Quantum Choice through a network of user-specific data translation and parsing "maps."

Integrated File and Transaction Management

Additional capabilities, integral to the system, support key file/transaction management functions: Quantum EDI taps the power of Quantum Choice's service oriented architecture by making calls to the core application's "services" for data review, insertion and validation. Plexis' Bridging Filter Technology supports modularity and integration with other enterprise or legacy applications.

Sophisticated Validation Engine

Configurable EDI rules supported by flexible translation eliminates manual data entry inefficiencies. The sophisticated Quantum EDI validation engine allows for Plexis EDI programming specialists or your own knowledgeable I.T. staff to map, scrub, translate and validate data and set specific business rules to your organization's unique needs. By maintaining proprietary business rules, verifying the integrity of imported data and providing

crosswalk functionality, Quantum EDI saves time and reduces administrative costs associated with paper-based claims processing and managing complex trading partner agreements.

Flexible EDI Framework

Quantum EDI's advanced framework provides flexible services and functionality to multiple data formats, destinations and configurations. It provides for detailed logging with tracking visibility to efficiently and effectively streamline issue resolution. The Quantum EDI framework is an extensible gateway system that supports enterprise growth by easily and inexpensively adapting to data requirement changes.

Configurable EDI Rules and Data Conversion Interface

Quantum EDI features customizable benefit administration and claim processing rules. Additionally, the application supports documented flat file formats for executing one-time data conversion routines to expedite initial implementation for Plexis Quantum Choice and maximize productivity.

Plexis Healthcare Systems is one of the fastest growing claims processing software developers in the healthcare market-place, and has provided cost-saving solutions for healthcare organizations since 1996.

A Certified Microsoft Partner, Plexis is also a selected partner in Microsoft's Connected Health and Human Services (HHS) alliance.

Plexis software and services enable healthcare organizations to increase profitability and enhance customer satisfaction while helping them meet all current governmental regulations, including HIPAA.
